

Il clima ideale per l'esterno / Outdoor cooling

COOLING PRINCIPLE

Evaporative cooling is responsible for the chill you feel when a breeze strikes your skin. The air evaporates the water on your skin, with your body heat providing the energy.

By forcing water, by means of a high pressure pump, through our specially designed misting nozzles, we create a fog made by ultra fine water droplets with an average size of less than 10 microns.

These tiny water droplets quickly absorb the energy (heat) present in the environment and evaporate, becoming water vapor (gas). The energy (heat) used to change the water to gas is eliminated from the environment, hence the air is cooled.

Ideale per:
Applications:

Giardini
Piscine
Locali pubblici
Effetti speciali
Gardens
Swimming pools
Bars & Restaurants
Special effects
